# THE RELENTLESS PURSUIT OF PERFECTION.

Riding pleasure starts long before you get onto your motorcycle. Because when you know your safety is taken care of, you're free to enjoy the buzz of anticipation whenever you suit up for the next journey. That's why BMW Motorrad created the C.A.R.E. stamp of approval. C.A.R.E. stands for Concept of Advanced Rider Equipment, and represents the unwavering commitment to **safety, innovation, comfort** and **quality** that goes into designing every item of BMW Motorrad rider equipment.

Each product is years in the making. Whether we're talking about the hard-wearing new materials developed by a dedicated R&D team, the sophisticated design elements that increase both protection and comfort, or the testing methods devised and employed in-house, the highest standards are applied from start to finish. This relentless pursuit of perfection allows BMW Motorrad to ensure that its products meet standards far more stringent than CE and EU norms. Only then will they receive the C.A.R.E. stamp of approval. We want you to enjoy riding your motorcycle – and that doesn't just mean meeting standards. It means surpassing them, in everything we do.

Find out more at [bmwmotorcycles.com](http://bmwmotorcycles.com)

## SAFETY

Safety is the number one priority when out on the road. And this doesn't just apply to the bike itself – it means having the right protective clothing, too. When riders take to the tarmac, they're completely exposed, and there's a lot going on around them. They need to be prepared for anything that comes their way. That's why safety is one of four C.A.R.E. criteria, and central to the development of our rider equipment. Every last detail is subject to intense scrutiny to ensure comprehensive protection.

We take great care in ensuring that our products are compatible with one another. Whether you go for a BMW Motorrad jacket and pants, or combine several other products, each item must function as part of a single protective unit that leaves no part of the body vulnerable.

On all of our pants, jackets and suits, those areas most at risk in the event of an accident are reinforced, double stitched and fitted with state-of-the-art CE protectors. This ensures the garments can withstand all the usual stresses and strains of day-to-day riding, and even the hardest impacts on asphalt and gravel, without sacrificing freedom of movement.

The materials and treatments, the manufacturing techniques, and every test at every stage all reflect the pursuit of one goal: to provide riders with the highest level of active and passive safety and the most enjoyable ride possible. After all, at BMW Motorrad, safety is about providing total peace of mind.

## COMFORT

Just like safety, comfort is a crucial factor in the development of rider equipment. Ultimately, it's about providing maximum passive protection while ensuring riders are not distracted by any of the garments they are wearing.

Whatever the weather conditions, and however hot or cold it may be, anything less than total comfort might diminish their ability to react. That's why BMW Motorrad clothing includes the latest ventilation and membrane technologies.

Not only do our products look and feel great, they're also supremely functional. We strive to set new standards in everything we do. Whether it's the collar, the sleeves or the cuffs – we're meticulous about every part of every garment, no matter how big or small.

## INNOVATION

Innovation has been at the heart of BMW Motorrad since it was established in 1923. We've also led the way in the development of rider equipment since the mid-seventies. We've invested in years of research, development and testing to create solutions that meet a wide-ranging set of requirements for motorcycling clothing – with the aim of making the best even better.

Our groundbreaking BMW climate membrane technologies are prime examples of this: c\_change™ breathes in summer to keep riders cool, while locking in warmth on colder days, while the BMW climate membrane also offers a waterproof rating of 10,000 mm. Combining unprecedented damping properties with maximum comfort, our NP and NP2 protectors are great examples of why BMW Motorrad rider equipment is at the forefront of innovation.

C.A.R.E. is more than just a seal of approval – it's a promise to our customers that we're constantly breaking new ground to deliver safer, higher-quality and more comfortable products.

## QUALITY

At BMW Motorrad, we know that raising the bar means going to great lengths. That's why we put our products through mile after mile of testing to identify and eliminate any potential weaknesses. Every item in the BMW Motorrad rider equipment range is designed and built to endure the countless miles riders cover.

There are no legal requirements for quality and durability, so we decided to create our own standard with its own set of criteria. And this is something we're taking very seriously. In our dedicated laboratory, every item of BMW Motorrad rider equipment is tested down to the last detail to ensure incomparable quality – and this includes the development processes and the materials used to make them.

We shake, scrape and smash practically everything within our reach in our test facilities. As a result, you're unlikely to find the same level of quality anywhere else.

# C.A.R.E. STANDARDS – HOW THEY MEASURE UP

## SAFETY

CATEGORY	INDUSTRY STANDARD	C.A.R.E. STANDARD
Impact absorption	There is no legal requirement for specially fitted right and left-side protectors.	BMW Motorrad offers right and left-side protectors that can be adapted to the rider's specific shape. They offer excellent impact absorption performance and have won countless consumer awards.
Tear resistance	Materials must be able to withstand a minimum force of 100 N/cm <sup>2</sup> . (DIN EN ISO 13937-2:2000; tear resistance*)	We aim to use materials that can resist a force of 1000 N/cm <sup>2</sup> .
Impact/abrasion resistance	In standard industry testing, materials are exposed solely to an abrasive belt running at approx. 18 mph. (DIN EN ISO 13595-2:2002; impact abrasion resistance*)	The BMW testing institute simulates the impact, fall and slide of a 165 lb rider on motorway tarmac, at speeds of up to 75 mph.

## INNOVATION

CATEGORY	INDUSTRY STANDARD	C.A.R.E. STANDARD
Water resistance	According to DIN standards, fabric with a water head of 1,300mm is considered waterproof. (DIN EN 20811:1992; water resistance*)	The BMW climate membrane offers a 10,000-mm head of water, while also being incredibly breathable.
Practicality	Legal requirements do not call for motorcycle clothing to be tested in use at all.	BMW Motorrad test riders assess the practicality of every item we produce over numerous rides (including endurance testing) in a range of weather conditions.

\* As of October 2014

## COMFORT

CATEGORY	INDUSTRY STANDARD	C.A.R.E. STANDARD
Fit and ergonomics	In general, only standardized sizes are available. (DIN EN ISO 340*)	The sizes we offer are based entirely on the dimensions measured and supplied to us by our customers.
Height-adjustable protectors	There is no legislation that requires knee protectors to be height-adjustable.	Our protectors are height-adjustable as standard, ensuring the perfect fit for each rider.

## QUALITY

As there are no legal requirements for quality, we use the appropriate DIN EN ISO standards as a basis. BMW Motorrad requirements dictate that at least 5 of the 7 criteria should be met.

CATEGORY	INDUSTRY STANDARD	C.A.R.E. STANDARD
Resistance to fading	No industry standard.	Garment samples are spread out under xenon light to test their resistance to fading. (Taken from DIN EN ISO 105-B02:2002; resistance to fading*)
Rub fastness	No industry standard.	Each material is placed alongside a wet or dry testing fabric, and the two are rubbed together. The material's rub fastness is assessed based on the coloring of the test fabric. (Taken from DIN EN ISO 105-X12:2002; rub fastness*)
Color fastness to perspiration	No industry standard.	Textiles are placed alongside a testing fabric soaked in sweat, and the two are rubbed together. (Taken from DIN EN ISO 105-E04:2013; fastness to perspiration*)
Oil repellency	No industry standard.	Materials are tested for their resistance to oil in the same way as the color fastness analysis. (Taken from DIN EN ISO 105-X12:2002; rub fastness*)
Fastener abrasion resistance	No industry standard.	Textiles are subjected to the Martindale abrasion test, at a force of 9kPa over 4000 cycles, to assess their resistance to wearing. (VDA 230-210:2008, taken from DIN EN 530:2013; fastener abrasion resistance*)
Abrasion resistance	No industry standard.	Each material is rubbed against a standardized piece of test fabric over 30,000 cycles. (Taken from DIN EN ISO 12947-2:2007; wear resistance*)
Washing fastness	No industry standard.	Textiles are sewn into a piece of test fabric, then placed in a beaker full of detergent solution and agitated. The test fabric is then dried, and the coloring assessed. (Taken from DIN EN ISO 105-C06:2010; textile washing fastness*)

# SUITS

Motorcycle riders know the value of all-round protection from wind and rain as well as anyone. That's why, with products like the one-piece CoverAll suit, waterproof touring apparel and the two-piece Atlantis suit, BMW Motorrad offers a range of integrated solutions covering virtually any condition. The latest highlight, the EnduroGuard, is a robust off-road riding suit and the ideal companion for uncompromising globetrotters.

# JACKETS/ PANTS

Comprehensive protection is essential for every rider – for the back and knees in particular. A lot of that comes down to what you wear out on your bike. Whatever your clothing is made of – genuine leather, tough synthetic fabric or Kevlar reinforced denim – three things matter most: total comfort, a stylish fit and maximum safety.

### SANDIEGO JACKET

#### CUTS FOR MEN AND WOMEN

Ride with style this summer – a classic mix of waxed fabric and abrasion-resistant leather. Just take out the shoulder and elbow protectors for non-bike wear. Incredibly comfortable, with enough pockets for all those essential bits and pieces. Perfect for everyday use.

- Relaxed-cut motorcycling and leisure jacket for men and women
- 1-1.2-mm abrasion-resistant cowhide sleeves and shoulders, with a lightly used look
- Rest of jacket made of hard-wearing waxed fabric
- Removable NPL protectors at shoulders and elbows
- NPL back protector retrofittable
- Zip on inner seam for removal of back and shoulder protectors
- Full-length metal front zipper
- Multiple zippered chest pockets and side pockets
- Double-thickness fabric on back
- Elegant lining with Make Life A Ride printed in large letters on the back; two inner pockets and one smartphone pocket
- Zipper and stud fastener at the wrist
- Lapel collar closable with press stud

- Straight, hip-length fit for men; shorter tailored fit for women
- Connector zip: 40 cm
- Regular zip

# GLOVES

A rider's hands need the best possible protection at all times. BMW Motorrad offers wind and waterproof gloves, reinforced on the sides and at the ball of the hand, to ensure a firm grip on proceedings in all conditions. There's no compromise on comfort, either: the Two-in-One glove, for example, comes with multi-purpose two-chamber technology and touchscreen-compatible fingertips.

<b>Two in One gloves</b>	52
<b>EnduroGuard gloves</b>	53
<b>DoubleR gloves</b>	54
<b>AirFlow gloves</b>	55
<b>Rallye gloves</b>	56
<b>GS Dry gloves</b>	56
<b>Atlantis gloves</b>	57
<b>ProSummer gloves</b>	57
<b>ProWinter gloves</b>	57
<b>Allround gloves</b>	58
<b>Silk undergloves</b>	58
<b>DownTown gloves</b>	59
<b>ProSport gloves</b>	59
<b>Rockster gloves</b>	60

### COOLDOWN VEST

**UNISEX**

This revolutionary performance vest uses evaporation to cool the wearer. When the vest is wet, the HyperKewl system locks in the moisture and stores it for up to eight hours, reducing heat by 10 to 20°F compared to the ambient temperature. At the same time, clothing stays perfectly dry.

- A cooling vest with HyperKewl functional fabric at the back and front
- Constant cooling effect through evaporation
- Outer: nylon and polyester functional fiber
- Stretchy side sections
- Front zip

**COLOR**

Black

**SIZES**

XS-2XL

**PRICE**

\$129.00

### HEAT UP VEST

**UNISEX**

This lightweight, sport-style vest fits beneath all BMW Motorrad jackets, and keeps the wearer warm in cool weather. The heating elements are positioned according to the specific requirements of motorcycling, while the vest's settings can be adjusted via the optional controller. Please note the controller is not supplied as standard, and must be purchased separately.

- Warming polyester vest with slim-cut fit
- Breathable, moisture-wicking and windproof
- Five heating elements located in the chest, back and kidney area
- Three heating levels, max. 35 W at 12 V
- Plugs into on-board socket
- Lightweight fleece lining for optimum insulation
- High, insulating collar
- One inside pocket

# ***BAGS/ ACCESSORIES***

Whatever the weather, there will always be riders out and about – which is why the right equipment is absolutely essential. No matter how rough the conditions, there's a suitable soft-luggage solution in the BMW Motorrad range. Take the luggage roll, for example. It attaches quickly and easily to every BMW motorcycle, and it's equally suitable for day trips or lengthy tours.

- Large leather section at back
- Steplessly adjustable

**COLOR** Black  
**PRICE** \$65.00

**RIDE SUNGLASSES**

- Stylish, high-performance metal-framed sunglasses
- Scratchproof lenses, tinted in Dark Grey
- 100% UVA, UVB and UVC protection, even in bright sunlight
- Designed to fit comfortably inside your helmet
- Close fit provides slipstream protection
- Soft plastic nose pads prevent pressure discomfort
- BMW Motorrad logo on both arms
- Includes case and microfiber pouch, both BMW-branded

**COLOR** Gun  
**PRICE** \$119.00

**FUNCTIONAL SUNGLASSES**

- Cool, sporty and lightweight performance sunglasses
- Switchable plastic lenses for different weather conditions:
  - Brown = high-contrast, anti-mist coating
  - Grey = slightly mirrored, scratchproof coating
  - Clear = anti-reflection and scratchproof coating
- Dark-coloured glasses offer 100% UVA, UVB and UVC protection, even in bright sunlight
- Designed to fit comfortably inside your helmet
- Highly curved, close-fitting design fit provides slipstream protection
- Black plastic frame with Anthracite gummed-plastic inserts
- Soft plastic nose pads prevent pressure discomfort
- Includes case and microfiber pouch, both BMW-branded

**COLOR** Black/Anthracite  
**PRICE** \$139.00

**AirTex**

With a resistant, net-like Dynafil structure, AirTex allows air to flow freely, keeping you cool even at higher temperatures. It is extremely light, yet offers all the safety you'd expect from a motorcycling jacket, and is ideal for hot-weather riding.

**Azo dyes**

These may not be used in colored outer materials since they can break down into carcinogenic amines.

**BMW climate membrane**

A functional membrane that meets BMW standards and is breathable, waterproof and windproof.

**Breathability**

Technically defined in terms of resistance to evaporating heat transfer (RET). The lower the RET, the more breathable the material.

**c\_change**

Also combined with the bionic c\_change climate membrane in a three-layer laminate. The intelligent c\_change membrane adapts the size of its pores according to the exterior temperature, thus allowing the skin to breathe in hot weather, and locking in heat on colder days.

**CE test mark**

The CE (Communauté Européenne) mark indicates that the product complies with European Union safety directives.

**coldblack**

Treatment for dark material that reflects the sunlight and protects against UV rays, keeping suits cooler for longer.

**Cordura 500**

Nylon yarn consisting of 100% polyamide. The manufacturing process involves respinning and weaving the cut polyamide fibers. Has a melting point of 410 °F.

**Design**

The characteristics of BMW design include the use of classic shapes and colours.

**DuPont Coolmax**

DuPont Coolmax consists of hollow fibers which transport humidity to the outside very quickly by capillary action, making the material dry 50% faster than cotton.

**Dynafil**

A highly tear-resistant polyamide yarn that is even more robust than Cordura 500/700 and resistant to high temperatures.

**Dynatec**

Fabric made of Dynafil. Tear-resistant and extremely robust, with a melting point of 554°F.

**Expanding pleats**

The upper material is sewn onto the stretch fabric in a corrugated form. This allows the compound to stretch, making the tear-resistant outer material even safer.

**GORE-TEX®**

A membrane made of teflon (polytetrafluorethylene). Countless microscopic pores prevent the penetration of large water droplets while allowing the much smaller water vapour molecules to pass through. The branch-like structure of the membrane means that it is also windproof.

**Hydrophobic treatment**

A treatment which renders leather water-resistant. BMW uses the vat immersion technique. During this process, only the leather fibers are coated, to ensure the pores stay open and the leather remains breathable. Depending on use, dry cleaning ensures the garment maintains its waterproof performance over several years.

**HyperKewl system**

The HyperKewl water management system absorbs and stores moisture, then gradually releases it via evaporation. This has a cooling effect that reduces heat by 10–20°F, compared to the ambient temperature. It means the body stays cooler, and is better able to perform in challenging conditions.

**Insert**

A removable membrane allowing a wide variety of uses in different climates. For protection, it is embedded in a very lightweight fabric on the top and bottom, and the first layer of the jacket will get wet if it rains.

**Kangaroo leather**

Finer, more closely woven fibers and a tighter structure make this leather even more durable than cowhide.

**Keproshield**

Highly protective material made of Kevlar, Dynatec and cotton, bonded together with the c\_change bionic membrane as a three-layer laminate, and treated with coldblack reflective technology.

**Keptotec**

A blend of Kevlar and PA fibers which enhances Kevlar's already excellent stretchability and abrasion resistance. Used to reinforce those areas most at risk in a fall, such as the elbows, shoulders, knees and thumbs.

**Laminate**

A layered structure of various materials created by thermal adhesion (the adhesive is usually applied in spots), and particularly suited for use with all-weather membranes. Can also take the form of a lining laminate or three-ply laminate, and does not always need to be thermally attached to the outer material.

**Leather**

Because all leathers are not equal, we only use the very best. With a minimum thickness of at least 1.2 mm for our suits, and often much more, they offer exceptional abrasion resistance as a result.

**Material strength**

The specific combination of materials and protectors used in each product determines its abrasion resistance, tear resistance, impact resistance and burst strength.

Categories:

- 1 star: average
- 2 stars: good
- 3 stars: exceptionally hard-wearing in all areas

**Motorcycle-specific cut**

This cut takes account of the body's contours in the riding position. The tops of the sleeves are further forwards, the sleeves and legs are angled, and there are numerous other special design details.

**Nappa leather**

The upper surface of the hide. Smooth and slightly shiny, worked to a soft leather with a fine grain.

**Nickel-free accessories**

All BMW Motorrad buttons and zips are nickel-free to protect the skin.

**Nubuck leather**

A highly breathable leather with a slightly roughened surface, for a smooth, firm grip.

**Nyspan®**

A bi-stretch fabric made from comfortable elastic yarn - deforms easily, but with excellent recovery properties.

**PCP/CP**

Pentachlorophenol (PCP) is banned under the German prohibited chemicals order of 14 October 1993, though it may be used in concentrations of up to 5 mg/kg in leather processing.

**3-Perform**

Abrasion-resistant, three-layer elasticated laminate that is windproof, waterproof and breathable thanks to the BMW climate membrane.

**PITTARDS**

An English tannery that produces specially treated Cabretta leather, entitled WR-100/WR 100X. The leather absorbs very little water and is resistant to sweat, making it especially suitable for use in gloves. It is particularly soft to the touch, and remains so over the long term.

**PORON®**

A foam that comes in a variety of densities and specifications. Our gloves use specially designed foams that provide a high level of impact protection and keep their shape over a long period.

**ProTechWool**

A unique blend of wool and polyamide. It's breathable, quick-drying and heat-conducting.

**ProtectionGuard**

Combines the looks, quality and technical properties of raw leather with the easy maintenance of a performance fabric.

**schoeller PCM**

Derived from space research, this material features special paraffin capsules that allow it to store heat when warm and release it when the temperature drops. This means it can minimize fluctuations in body temperature, keeping the rider comfortable. The material is at its most effective between 40 and 75 °F.

**Seamless bonding technology**

This process involves placing two pieces side by side, then covering the join with tape and pressure-bonding them with hot glue to create a flat, elastic join rather than a sewn seam.

**Serafil**

Highly tear-resistant safety yarn used in all BMW Motorrad motorcycle suits.

**Shape-Shift™ technology**

This uses a partition in the reservoir to keep the drink tube flat even when the two-litre container is full.

**Safety, active and passive**

Active safety measures are designed to prevent accidents, for example by using reflective material for good visibility. Passive safety features aim to minimize the effects of an accident, for instance by employing impact-resistant protectors and outer materials.

**TFL Cool System**

Cool technology is used in dark leather and fabric garments. Thanks to a special manufacturing process, sunlight is reflected from the dark surface of the leather or fabric in the same way as from a light surface, making the outer material much less likely to overheat.

**Ventilation**

Various materials and technologies are used to improve air circulation and regulation of body temperature.

Categories:

- 1 arrow: numerous systems/zips to assist ventilation
- 2 arrows: specific materials used for improved ventilation
- 3 arrows: outstanding ventilation

**Z-liner**

Here, the membrane is like a lining "suspended" between the outer material and the lining itself.
